

PHOENIX
COMMUNITY CAPITAL

Welcome!

On behalf of our amazing community, we welcome you! Join us, as we work together to seek out and create sustainable growth for our investments over time. Our community empowers both seasoned cryptocurrency investors and those new to the cryptocurrency space by providing access to a diverse portfolio of On-Chain and Off-Chain investment products and services.

We at Phoenix Community Capital work diligently towards the goal of identifying and removing guesswork and confusion for our community members within the ever-changing cryptocurrency investment landscape. We are curious by nature, and we are not afraid of using our many analytical tools and methodologies to dig deep and discover answers to questions like, “How do we assess risk in the cryptocurrency ecosystem?”, and, “How can one’s wealth grow in a sustainable manner?”.

An innovative step forward in the creation of sustainable
passive income generation

How We Are Unique

Phoenix Community Capital is the world's first pre-deployment audited DAO (audited by Certik) with a Doxxed Leadership Team. Our community enjoys the benefits of Phoenix Community Capital research, where we conduct risk assessment and sustainable growth analysis for the purpose of identifying large-scale, high-yield return investments over time, of which all of the members of our community may benefit from. For example, our initial, primary investment product is designed to enable our community investors to earn a return of \$FIRE Tokens.

With Phoenix Community Capital's members having voting rights within our Decentralized Autonomous Organizations (DAO), we are able to stay integrally connected to what is important to our members. For example, many of our members come from all ranges of life experience, some of which have prior professional financial experience, and a select few of which have demonstrated competency serving as an advisory board to fellow community members and PCC's Founders. This leads to success for all of our community.

Rise from the ashes of legacy finance with Phoenix
Community Capital and take flight with a DeFi you can trust

Our Vision

- There is a reason why Community is in the center of our namesake, Phoenix Community Capital. That reason is, that we, as members of our own community, desire to move together as a whole community, and as a result, all community members end up benefiting from participating in a select range of DeFi investments, traditional crypto investments, liquidity pools, project incubators, as well as, real world asset investments including a balanced range of low, medium, and high risk/reward profiles.
- Phoenix Community Capital will research and independently verify each protocol that will be invested in through an experienced team that eats, sleeps, and dreams about DeFi.

Community Member Benefits

- Lowered Risk - Our competitors promise returns which are unsustainable over time
- Lower Fees - We hate high fees as much (or more) than you do
- Less Hassle - Where possible, improve the quality of life for our community members, as life has more than enough hassle already
- Less Homework - The ONLY time homework was fun for us growing up, is when we were super passionate about the subject matter

How Does This Work?

\$FIRE operates on the Avalanche (AVAX) network. The total supply of \$FIRE Tokens is limited to one (1) million tokens.

Our initial, primary investment project is designed around an investment position called a Nest. Nests are the tools that allow you to generate \$FIRE Token rewards, the funding of which reinforces the sustainable growth of the token by design. This means that Nest owners are double beneficiaries, as rewards increase with the appreciation of the value of \$FIRE.

Accumulation of \$FIRE Tokens can either be sold on the open market to secure an immediate return, or they can be reinvested, which is designed to compound future \$FIRE Token growth rates for an even larger future return. As a community member, you will have complete autonomy to decide when you want to buy, sell, or reinvest your \$FIRE Tokens, and Phoenix Community Capital is working hard for our community members to understand and experience the strategies for success.

Maintenance Fee

The cost of the maintenance fee is 0.2 \$AVAX per Nest per 90 day period. Maintenance fees can be paid to cover up to a 180 day period.

Claiming Fee

When Nest owners claim rewards, there is a fixed 0.05 \$AVAX fee per Nest claimed.

Understanding Our Treasury

There is a single unique wallet created for Phoenix Community Capital treasury holdings.

We will display the dollar value in USD of the treasury holdings on the app site. We will also create a page to display the breakdown and percentage makeup of the various investment projects, coins, and tokens that we're investing in to show the community how the portfolio looks, formatted as a ledger.

The treasury will be triple locked. The triple locked signatures to authorize any transaction are the following three key holders: (1) CEO - Eric, (2) CMO - Luke, (3) DAO representative - which initially, at launch will be Showtime, but will be open for community vote once things normalize post launch. This means that at launch, Phoenix Community Capital will have a triple locked treasury and will run on a majority vote rule. This allows us to remain active in the case of a potential illness or death of one of our treasury key holders.

Our treasury strategy is operated as a community investment fund. This is funded via the Tokenomic payments and optional operating expense account injections into the treasury wallet. One of the roles of the Phoenix Community Capital management team is to source, research, and deliver projects to the Phoenix Community Capital DAO for members of the community to vote on for potential investment. We welcome and encourage all community members to propose projects that they find potentially valuable.

Please note that, while we have intentionally formed the project in such a way as to give the community an unprecedented voice regarding the direction of investments, there may be times that the Phoenix Community Capital management team may make operational decisions without conducting a community vote and we reserve the right to do so as necessary for the ongoing continuation and benefit of the community members.

Tokenomic Breakdown

When a Nest is created as a result of the purchase or claim of 10 \$FIRE Tokens, seven (7) of those \$FIRE tokens are transferred to the community member Nest rewards pool, one (1) of those \$FIRE tokens is added to the liquidity pool and is split as 50% FIRE and 50% AVAX, and two (2) of those \$FIRE tokens are transferred to the community investment treasury wallet.

A non-fungible token (NFT) is a unique and non-interchangeable unit of data stored on the blockchain, a form of a digital ledger. They are used to reward

investors with an increased growth rate of \$FIRE Token rewards. For our initial investment project, there are two NFT options.

- The first NFT is called a Master NFT, and its function is to increase the initial Nest token reward rate from 0.225 to 0.250 (which is an increase of 0.025 per Nest). The cost of the Master NFT is ten (10) \$AVAX. The Master NFT is applied to a set of ten (10) Nests.
- The second NFT is called a Grand Master NFT, and its function is to increase the Nest reward rate of \$FIRE Token rewards from 0.250 to 0.300 (which is an increase of 0.05 per Nest). The cost of the Grand Master NFT is one hundred (100) \$AVAX. The Grand Master NFT is applied to a set of one hundred (100) Nests.

Phoenix Nest

10 token to purchase a Nest

Rewards 0.225 per day per Fire Nest

Master NFT

10 Nests required to purchase a Master NFT

Rewards an additional 0.025 per day per Fire Nest

Maximum of 10 Master NFT per Wallet

Grandmaster NFT

10 Master NFT required to purchase a Grandmaster NFT

Rewards an additional 0.05 per day per Fire Nest

Maximum of 1 Grandmaster NFT per Wallet

Founders' Restrictions

Founders of Phoenix Community Capital will receive a set amount of \$FIRE tokens at the creation of the \$FIRE token itself, as compensation for the creation of this DAO having used their own personal funds to start this community effort. The founders intentionally decided to tie their success to the success of the community members, and as such, the founders' tokens will be under a selling restriction for the first three months of the project. After three months, the founders may sell a fixed amount each day determined to not negatively impact market pricing.
